

Sutton Direct

Specialty Modules for SYSPRO®

Enhancing SYSPRO® enterprise software with no overlap in functionality. **SuttonDirect** modules are all developed specifically for the needs of SYSPRO® users.

ADVANCED CYCLE COUNT

- Provides users with a formalized random selection of stock codes for cycle counts
- Assigns count frequency based on ABC classification automatically
- Ability to also assign troublesome stock codes into Control Groups
 - 1,2,3...or D (Daily), W (Weekly), B (Bi-Weekly), M (Monthly),
 - Flexible Count Frequency
- Maintains a complete history of cycle count results for analysis
- Provides a tool to analyze your cycle count history
- Records the date of the last cycle count for each stock code
- Records the number of cycle counts for each stock code
- Works in conjunction with the standard SYSPRO® Stock Take System to add more detailed control and accuracy to the cycle counting process.
- Added tables are defined to SYSPRO® Report Writer and Crystal Reports, allowing users to do custom analysis of Cycle Count History

“The SuttonDirect Advanced Cycle Count Module provides us with a fast and accurate way to verify inventory quantities. The ability to assign stock codes into control groups insures us that our high volume inventory is accurate, allowing us to reliably meet customer demands.”

Bill Fiegner CFO, Stafford Manufacturing

Count Analysis

The Count Analysis program shows the number of times A, B, C, and D items should be counted. Using the “Counts” columns **you can see the number of items that you would need to do per Cycle Count based on the periods shown.** The program calculates the number of items per period that will be counted on average based on your selection criteria.

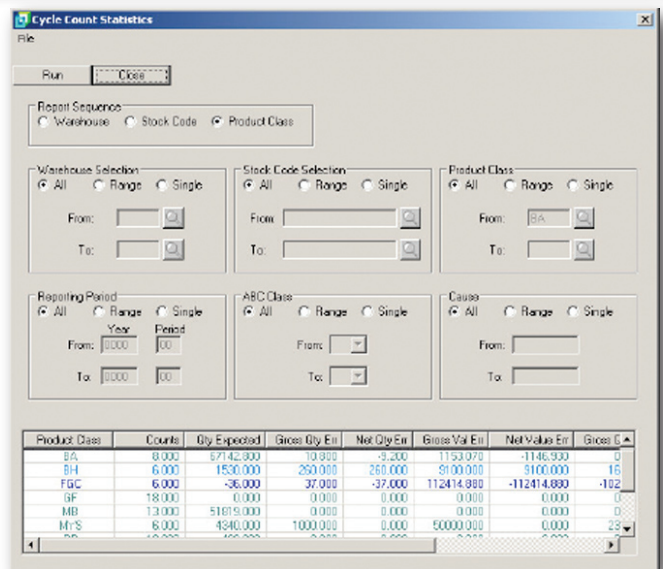

Item Type	Nbr of Items	Times /Year	Counts /Year	Counts /Semi-Ann	Counts /Quarter	Counts / Bi-Month	Counts /Month	Counts /Bi-Week	Counts /Week	Counts /Day
A	171	4	684	342	171	114	57	28	14	3
B	217	2	434	217	109	73	37	18	9	2
C	303	1	303	152	96	64	32	16	8	2
D	7,837	1	7,837	3,919	1,960	1,307	654	314	157	33
Total	8,613		9,338	4,670	2,336	1,556	780	376	188	40

Capture and Confirmation

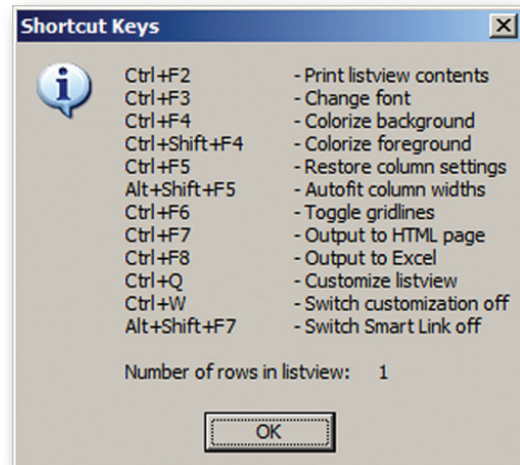

Once all the Cycle Count information is verified, this program captures the cycle count information into a separate database, stored by date, for historical analysis. This program will then confirm the cycle count. **This means you have a complete historical record of your cycle count activity for audit and analysis purposes.**

Cycle Count Statistics

This program uses the data that is stored in the database of Cycle Count Results which was created by the Capture and Confirmation program. **This program allows users to reports on the accuracy of cycle counts for any financial period.** These reports are available in summary by warehouse, product class, or stock code, with further selections based on cause code and ABC Classification. The reports can be dropped into Excel for users to create their own charts and graphics. This allows you to painlessly chart your Cycle Count Accuracy over time, proving that your cycle counts are accurate enough to avoid the Annual Inventory Audit. For Auditors, Reports can be generated from the Raw Data from every Cycle count!

Product Class	Counts	Qty Expected	Gross Qty Err	Net Qty Err	Gross Val Err	Net Value Err	Gross C
BA	8,000	5,714,300	10,000	-5,200	1153,070	-1146,930	0
BH	6,000	1530,000	250,000	250,000	5100,000	5100,000	16
FGC	6,000	-36,000	37,000	-37,000	112414,980	-112414,880	-102
GF	18,000	0,000	0,000	0,000	0,000	0,000	0
MB	13,000	5169,000	0,000	0,000	0,000	0,000	0
MFS	8,000	4240,000	1000,000	0,000	50000,000	0,000	25

Shortcut	Function
Ctrl+F2	- Print listview contents
Ctrl+F3	- Change font
Ctrl+F4	- Colorize background
Ctrl+Shift+F4	- Colorize foreground
Ctrl+F5	- Restore column settings
Alt+Shift+F5	- Autofit column widths
Ctrl+F6	- Toggle gridlines
Ctrl+F7	- Output to HTML page
Ctrl+F8	- Output to Excel
Ctrl+Q	- Customize listview
Ctrl+W	- Switch customization off
Alt+Shift+F7	- Switch Smart Link off
